Additional Comments or Feedback (please be direct, specific, and constructive)

The lecture was easy to understand and there were ample practice questions to apply the material.

I liked that there were many different examples of things that are "can't miss" and it gives us the confidence to make these calls prior to radiology read

Great talk!

Great presentation and refresher on multiple topics regarding CXR.

This was super helpful and even more helpful to see so many different examples along with some lecture component in the beginning.

learned a lot. felt like the content of the lecture was very applicable

Very informative and the cases were great. Maybe throw in a normal xray to throw us off.

Helpful to go through cases

Excellent as always

Great presentation and learned a lot

As always Dr. Broderick has the best talks. Zero constructive feedback

Maybe we can go through the structure of interpreting an xray a few times so we can practice it

Great talk about chest x rates and common pathologies. Would love talks on all chest imaging

Amazing lecture! Very helpful! I think I struggle with interstitial patterns and could use more teaching on that

Really helpful! Thank you!

Really helpful talk, thank you!

Discussion of normal anatomy might be helpful

Make this an hour and a half session

My feedback was that it was really helpful.

Amazing thank you
